Physical & Environmental Security Policy

Topic-Specific Policy - Physical Access, Equipment & Environmental Protection

POL-024 · v1.0 · 2026 · Internal : Restricted

Document Information

Policy ID	POL-024
Version	1.0
Status	Active
Classification	Internal - Restricted
Owner	IT Admin
Approver	CISO
Review Cycle	Annual
Next Review	Q3 2027
Frameworks	ISO 27001:2022 A7.1–A7.5, A7.8, A7.9, A7.11–A7.13 · SOC 2 CC6.4

1. Purpose

This Physical & Environmental Security Policy establishes how ResolvX protects the physical spaces, equipment, and environmental conditions its people and infrastructure depend on.

ResolvX runs entirely on AWS cloud infrastructure and has no owned data centre. It defines what ResolvX inherits from AWS's physical security posture, what ResolvX is directly responsible for at its own workspace, and how equipment is protected wherever it physically sits, in the office or with a remote employee.

2. Scope

- ResolvX's corporate headquarters (New York, NY) and any other ResolvX-operated workspace.
- Corporate equipment, wherever it is physically located, office, home, or in transit.
- Oversight of AWS's physical data centre security as ResolvX's hosting provider.

3. Hosting Infrastructure - Inherited Physical Security

ResolvX does not operate or have physical access to the data centres that host its production infrastructure, that physical security is AWS's responsibility under the AWS shared responsibility model, and is independently certified rather than something ResolvX verifies through direct inspection.

- AWS's physical and environmental controls are covered under AWS's own SOC 2 and ISO 27001 certifications.
- ResolvX's responsibility is oversight and not operation. AWS is tracked as a Tier 1 Critical vendor under POL-005, with its security posture (including physical/environmental controls) reviewed as part of that ongoing vendor assessment, not assumed indefinitely.
- Head of Cloud Ops retains AWS's current compliance attestations (SOC 2 report, ISO certificate) as audit evidence.

4. Corporate Workspace Physical Security

- Access to ResolvX's office space is limited to authorised personnel; visitors sign in and are escorted while on premises.
- Areas where Restricted or Confidential discussions occur (per POL-004) are treated as secure areas.
- Physical access provisioning and revocation for the office follows the same timing as system access under POL-023 §8. Access to the physical workspace is removed on the same timeline as system access at termination, not on a separate, slower schedule.

5. Equipment Physical Security

Equipment security scales with where the equipment sits, consistent with POL-011's asset lifecycle and POL-022 §7's remote working standard:

- Office equipment (if any beyond personal laptops) is sited to reduce unauthorised physical access and environmental risk (e.g., not positioned where it's visible or accessible from public areas).
- Off-premises equipment (remote employees' laptops) remains the individual's responsibility to physically secure which is consistent with the acceptable use expectations already set in POL-002.
- Lost or stolen equipment is reported immediately under POL-015 §4, since a lost device carrying access to ResolvX systems is a security incident, not only a replacement-cost matter.

6. Environmental Protection

6.1 Inherited Infrastructure Protection

Environmental protections for production infrastructure — power redundancy, fire suppression, climate control — are inherited from AWS per §3, covered under AWS's own certifications rather than something ResolvX independently verifies on-site.

6.2 Regional Environmental Risk - New York City

New York City carries documented flood exposure, in a case where Hurricane Sandy disrupted offices and infrastructure across Lower Manhattan in 2012, and FEMA's flood zone maps for the city have since been revised and expanded. IT Admin confirms the specific FEMA flood zone designation for ResolvX's actual office address using FEMA's Flood Map Service Center, documents the result, and reviews it whenever FEMA issues updated maps for the area rather than treating a single historical check as permanent.

6.3 Link to Business Continuity

Because ResolvX operates as a remote-capable organisation (POL-022 §7), an environmental event that makes the physical office unusable — flooding, fire, extended utility outage — has limited operational impact: personnel continue working from wherever they are, and no production system depends on the office being open. This is a deliberate resilience characteristic of ResolvX's operating model, the office's availability is not a dependency the Business Continuity & Disaster Recovery Policy (POL-008) needs to plan around, unlike the Critical-tier cloud infrastructure POL-008 does address.

6.4 On-Site Equipment Protection

Any network or IT equipment ResolvX maintains on-site (e.g., office networking hardware) is protected by basic surge protection and, where practical, battery backup which is proportionate to the fact that no production system depends on it, unlike infrastructure covered under §3.

6.5 Environmental Incident Reporting

A water leak, fire, or similar environmental event at the office is reported the same way any other incident is, under POL-015 §4, rather than being treated purely as a facilities matter. Whether it also has security implications (e.g., damaged equipment containing Restricted-tier data) is assessed as part of that same reporting path, not decided informally at the time.

ResolvX's workplace emergency action plan (evacuation procedures, alerting, employee communication during an event) follows the general framework FEMA's Ready Business programme recommends, aligned to NFPA 1600, wherein this policy establishes the requirement; the plan's specific procedures are maintained as a separate operational document by IT Admin.

7. Relationship to Clean Desk & Clear Screen

Day-to-day workspace hygiene such as locking screens, not leaving sensitive documents visible is governed by the Clean Desk & Clear Screen Policy, not restated here. This policy governs the physical space and equipment those practices happen within.

8. Roles & Responsibilities

8.1 IT Admin

- Owns this policy and administers physical access to the corporate workspace.
- Coordinates equipment physical security expectations as part of onboarding.
- Documents the office's FEMA flood zone determination and reviews it upon updated FEMA maps (§6.2); maintains the workplace emergency action plan (§6.5).

8.2 Head of Cloud Ops

- Retains AWS's physical security compliance attestations (§3) and reviews them as part of vendor assessment under POL-005.

8.3 All Personnel

- Physically secure equipment in their possession, wherever it's located (§5).
- Report lost or stolen equipment immediately (§5).

9. Compliance and Enforcement

Unauthorised physical access to ResolvX's workspace, or equipment left unsecured in a way that results in loss or theft, is treated as a control deficiency and logged in the Corrective Action Plan.
